

Milestone 3 Software Project

Test case ID:	Test 1
Application:	Desktop
Test title:	Photographer login
Expected Result	Username correct and password correct Welcome Message Goes to next form
Actual Result	Welcome message shown when username and password correct Goes to next form
Passed:	Yes

Test case ID:	Test 2
Application:	Desktop
Test title:	Photographer login Invalid data
Expected Result	Username incorrect and password incorrect Incorrect password and username message Does not go to next form
Actual Result	Message shown for incorrect fields Goes to next form
Passed:	No

Test case ID:	Test 3
Application:	Web
Test title:	Client login
Expected Result	Username correct and password correct Check username and password in database Goes to home page
Actual Result	Goes to home page
Passed:	Yes

Test case ID:	Test 4
Application:	Web
Test title:	Client registered
Expected Result	Checks log in username and password in database if data does not exist directed to sign up page
Actual Result	Directed to sign up page
Passed:	Yes

Test case ID:	Test 5
Application:	web
Test title:	Contact us
Expected Result	An email should be send with the comment of the user
Actual Result	Error while sending email
Passed:	No

Test case ID:	Test 6
Application:	web
Test title:	Book event
Expected Result	Field all filled Inserted in database
Actual Result	Event booked Inserted in database
Passed:	Yes

Test case ID:	Test 7
Application:	web
Test title:	About us
Expected Result	About us page opens
Actual Result	About us page opened
Passed:	yes

Test case ID:	Test 8
Application:	web
Test title:	Portfolio page
Expected Result	Portfolio page opens
Actual Result	Portfolio page opened
Passed:	yes

Examine and modify project plan accordingly dependent on progress:

Mention 2 events which happened during the project which caused you to deviate from the schedule as planned in the Gantt chart.

When doing the log in and sign up page took more time to do for the reason I had a difficulty with the php and to connect to the database and store the user name in a session.

Had a bit of difficulty when creating the database for when creating relationships from one table to another which I needed to seek some help from my fellow class mates.

Explain how you modified your schedule accordingly

I modified my schedule by finishing other tasks that needed to be done while I asked help with the difficulties. So, by doing task that didn't involve the database, the log in and sign up I completed other pages.

Evaluate product in terms of meeting required aims:

Mention 2 modifications/improvements that can be included in the applications in a future release.

I would like to make a basket so people can order the products, make all the forms working and make a forum where people can upload their experience and memories with my service.

For each of the 2 events discuss what you can do in future projects to prevent these events from happening again.

These might be avoided in the future for the reason that I will keep building my skills on these tasks and for a project in the future I will know how to do certain tasks like these 2 more easily.

Assess whether product met required objectives:

Revisit the objectives you wrote in your Proposal document. Were all the objectives achieved? Clearly support your answer

From the objectives I needed to conquer for my website and also for my desktop applications a lot of these objectives have been reached like the client registration, log in and log out for the client, gallery page, about us page, contact us page and so on. The biggest objective for me was to accomplish the watch list that took a good amount of time but managed to do it and works good.

State using valid reasoning whether you agree with the comments of your friends/family in light to your YouTube video

Review and reflect on personal strengths:

Mention 3 personal strengths that you discovered while working on the project:

I made good plans during the day and objectives that needed to be handled as soon as possible and made sure to complete them day to day which my strength of good planning.

Another strength is that I don't hold back from asking assistance to my class mates and teachers.

I have a strength to make a nice design for my website which will attracted client's eyes.

Explain how these strengths helped you in the process:

These strengths helped me by when a problem occurs I will solve the problem more easily when I ask help from my class mates or teachers, the good planning helped by keeping my mind on the task I need to accomplish and for the strength of good designing for my website is that it will attracted more clients to the website.

Mention 3 personal weaknesses that you discovered while working on the project

One of my weakness is that I get distracted very easily.

Another weakness is that I stress myself a lot.

The biggest weakness is that I give up to easily.

Explain what you can do to improve on these weaknesses

I can improve these weakness to go to a quitter place to get things done and where I can't get distracted, try to calm myself down and try to believe in myself more.
